

**Statement on the efficacy of Eltra against Coronavirus****Background**

Coronaviruses are enveloped viruses causing human infections. Two different guidelines are available to support efficacy of disinfectants against enveloped viruses: EN 14476, using Vacciniavirus as a surrogate virus and a guideline of the German Society for the Prevention of Virus Disease (DVV) using Vacciniavirus and Bovine Viral Diarrhea Virus (BVDV) as surrogate viruses.

**Rationale**

The following data are available to support efficacy against viruses for the product under discussion:

Eltra<sup>1)</sup>            7 g/l; 60°C; 15 min; liquor ratio 1:5 **or** 5 g/l; 70°C; 15 min; liquor ratio 1:5  
virucidal acc. to EN 14476

**Conclusion**

It is concluded that Eltra as a chemothermal textile disinfectant is effective against Coronavirus under the above-mentioned use conditions.
