

Instruction Sheet

SMARTPOWER™ Mini Dispenser Installation

Prerequisite:

Remove feed of any liquid dosage system.

Disconnect internal pumps.

Make sure that the customer does not need the machine **for 90 mins.**

It is crucial to follow all steps from the installation manual.

PROTECTING WHAT'S VITAL™

Machine preparation:

- ✓ Machine is switched off
- ✓ Machine and backplate have the same temperature (ca. 20°C)
- ✓ Machine is clean and descaled
- ✓ Machine surface is free from biofilm and grease
- ✓ Machine surface is dry

- Peel off the protective foil from the backplate.
- Cautiously position the top of the backplate in horizontal position, then attach the rest.
- Apply a lot of pressure to the entire backplate with the installation roll for min. 60 sec.

Best practice: backplate and dispenser sit about 10cm below upper wash arm

Basic requirements:

- Choose an even surface inside the machine to allow good adhesive of the tape
- Allow easy removal and insertion of backplate

- Add sticker to the machine door and include date and time 24h from now
- Do not turn on the machine **for 60 mins!**

Correct alignment of backplate:

- Measure down from the top at two positions to align horizontally.
- Mark the right position on the wall
- Only horizontal alignment of the upper edge ensures proper water flow and right dilution

- Do not insert the dispenser to the backplate **for min. 24 hours!**
- Be cautious with the backplate when loading the rack in the machine in the first 24 hours.
- Operation in the first 24 hours: Add 1/4 block of SMARTPOWER Mini detergent & rinse to the sump of the machine. Reload every 5-10 cycles as needed.
